

Docket No. RSW920010141US1

ABSTRACT OF THE DISCLOSURE

METHOD AND APPARATUS FOR MINIMIZING INCONSISTENCY BETWEEN  
DATA SOURCES IN A WEB CONTENT DISTRIBUTION SYSTEM

5 A method, apparatus and computer implemented  
instructions for minimizing inconsistency between a set  
of data sources in a data processing system. A first  
signal is sent indicating that new content is present for  
the set of data sources. The new content is transmitted  
to the set of data sources in which the new content is  
10 unavailable for distribution by the set of data sources  
until a second signal is received by the set of data  
sources. The second signal is sent to the set of data  
sources if an acknowledgment is received from all of the  
sets of data sources.
